Plastic Surgery Thailand - Alaplasty

Transsexual Sex reassignment surgery/Sex change surgery

"Vaginoplasty (sex reassignment surgery/sex change surgery) is a dramatic and irrevocable final step in male to female gender transition. This step is usually taken only after the deepest introspection and counselling regarding all the options. For those needing complete gender correction, this surgery is a life saving and life enhancing miracle, and can enable them to live a full and joyous life afterwards."

-Facts at a glance-

Surgical Procedure

- The alar of the nose is reduced and suture in its position, aim is to make the balance of nasal tip and alar.

Duration of Operation

- Half hour

Risks and Complications

- A little bleeding is common during the first few days following surgery, patient may continue to feel some stuffiness for several weeks. Patient must try not to blow nose for a week or so, while the tissues heal.

After Care

- Nasal packing, it will be removed after a few days and will feel much more comfortable. By the end of one or, occasionally, two weeks, all dressings, splints, and stitches should be removed.

Recovery

- Most alaplasty patients are up and about within two days, and able to return to school or sedentary work a week or so following surgery.

Result

- Patient nose will begin to look better and spirits will improve. Within a week or two.

Hospital Admission

- Most patients do not need to stay in the hospital overnight.

Anesthetic

- The operation is done under either local anesthetic (you are awake) or general anesthetic (you are asleep). Most patients are happier when they are asleep.

Pre Operative Care

- Inform us about any allergies, any serious medical condition(s), and all medications you are taking (both prescription and non-prescription).
- Avoid aspirin and aspirin-containing medicines for two weeks prior to surgery.

Post Operative Care

- Your surgeon will give you more specific guidelines for gradually resuming your normal activities.
- You will still need to be careful not to blow your nose for about two weeks, and avoid bumps to the nose for about six weeks. Eyeglasses should be taped to the forehead, off the bridge of the nose, for the first month. Avoid strenuous activity (jogging, swimming, bending, sexual relations-any activity that increases your blood pressure) for two to three weeks. Avoid hitting or rubbing your nose, or getting it sunburned, for eight weeks. Be gentle when washing your face and hair or using cosmetics.
